

LITTLE KIDS CAN DO BIG THINGS WITH A BIG GOD!

Google meet with Acts for water.

Google meet with Water First

Not all people have access to clean drinkable water and we think that is not fair!

Google meet with legacy water foundation.

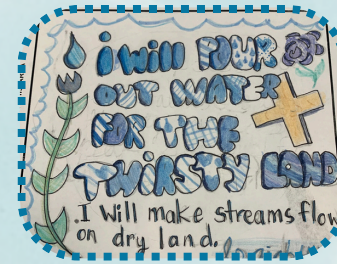

Water walk to raise money to support organization that assist water scarce communities.

Water bottle sticker challenge fundraiser

water for water challenge

We believe all people deserve clean drinkable water!

EVERYONE DESERVES ACCESS TO CLEAN DRINKABLE WATER!

Storyline: Happy campers on God's Campground: use binocular eyes to find those in need and see the awe and wonder of God's creation.

Driving Question: What can we do about the world water crisis?

Curricular connection: Understanding Earth's landforms and bodies of water, examining how living things (plants and animals) interact with their environment, including their dependence on water for survival and growth and exploring ways humans can contribute positively to maintaining or improving the health of water systems.

FLeX: In this FLeX project, students discovered that not everyone has access to the clean, drinkable water needed to live healthy, happy lives. They built relationships with organizations such as the Legacy Water Foundation, Water First, and Acts for Water through Google Meets. They gained a deeper understanding of the water crisis through stories and videos. Students raised awareness by creating posters, brochures, school announcements, and videos. Additionally, they raised funds to support these causes by completing chores, participating in the "Water for Water" challenge—where they were sponsored to give up all beverages except water—and engaging in a water walk, during which they carried buckets of water to raise awareness and gain a small perspective on the challenges faced by those without access to clean water.

Teacher Reflection: It has been my joy to watch young justice seekers dive in to learn about the water crisis and then enthusiastically make waves of change to help others gain access to clean, drinkable water. It is my passion to educate and inspire them, watching as they shift their focus to others and discover that even little ripples can create big impacts. These amazing kids are proof that little hands can do big things with a Big God—like helping thousands of people in a village far away access the clean water they need to thrive.

Student Reflection:

“ We walked around the school, it was very, very heavy but it was a good use of time because we helped a whole village get water! ” Nyah (previous student now in grade 5)

“ We actually saw a video of the wells that we fixed! It made me feel amazing and happy that we helped over 1000 people have clean water.” Berkley (previous student now in grade 5)
